

ENVIRONMENTAL POLICY

Document No.	Revision	Effective Date	Status
SQ-POL-004	00	30.08.2026	APPROVED

1. Purpose and Commitment

SafeQult Consulting recognises environmental protection as an integral part of responsible business conduct.

Our objective is to minimise the environmental impact of our own activities and to support clients in identifying and managing environmental aspects associated with their operations, particularly within the marine and offshore sectors.

We aim to combine compliance with environmental requirements with a practical approach to pollution prevention, waste reduction and responsible use of resources.

2. Compliance with Requirements

SafeQult Consulting is committed to operating in accordance with applicable environmental legislation, client requirements and relevant industry standards and good practice.

For marine and offshore assignments, we consider the nature of the operation, local conditions and environmental requirements relevant to the scope of work.

Compliance is regarded as the minimum standard and should be supported by active management of environmental impact.

3. Identification of Environmental Aspects

Environmental aspects should be identified and assessed to a level appropriate to the nature of the activity.

Particular attention should be given to areas such as:

- spill and pollution risks,
- waste management,
- emissions and fuel consumption,
- energy and resource use,
- impact on the marine environment,
- consequences of potential emergency situations.

Environmental aspects should be incorporated into risk management processes where they may be significant to the activity or operation.

4. Pollution Prevention

SafeQult Consulting supports an approach based on preventing pollution at source.

Priority should be given to avoiding environmental incidents through effective planning, appropriate controls and preparedness for emergency situations.

Where an environmental incident occurs, appropriate action should be taken to minimise its impact, secure the affected area and ensure appropriate reporting and investigation.

5. Responsible Use of Resources

SafeQult Consulting promotes the responsible use of energy, materials, fuels and other resources.

Where practicable and appropriate, we aim to:

- reduce unnecessary consumption of materials,
- minimise waste generation,
- use electronic documentation,
- avoid unnecessary travel,
- promote efficient and practical operational solutions.

6. Waste and Materials

Waste should be minimised at source, appropriately segregated and transferred for suitable treatment or disposal in accordance with applicable requirements.

Materials and substances that may pose an environmental risk should be properly stored, identified and secured.

Within its own activities, SafeQult Consulting seeks to reduce the use of disposable materials and paper where digital solutions are suitable.

7. Marine & Offshore

Environmental protection requires particular attention in marine and offshore operations due to the potential consequences of pollution for the marine environment.

As part of audits, inspections, assessments and consultancy services, SafeQult Consulting considers environmental matters relevant to the scope of the assignment, including:

- spill and leak prevention,
- control of hazardous substances,
- waste management,
- emergency preparedness,
- compliance with requirements for protection of the marine environment.

8. Competence and Awareness

Effective environmental protection requires appropriate awareness of environmental risks and applicable requirements.

SafeQult Consulting is committed to maintaining and developing environmental knowledge relevant to the services provided and to promoting responsible behaviour among those involved in our activities.

9. Continual Improvement

Experience from projects, audits, inspections, incidents and feedback should be used to identify opportunities to reduce environmental impact.

SafeQult Consulting supports practical environmental improvements that are proportionate to actual risk and capable of effective implementation.

10. Our Commitment

SafeQult Consulting is committed to conducting its business in an environmentally responsible manner and to supporting clients in reducing the environmental impact of their operations.

Our objective is to combine environmental responsibility with practical risk management and effective operations.

Environmental protection is not only about compliance. It is about responsibility for the way we operate.
